

- Chemical Resistant Materials
- Desired Foam Thickness
- Rinse Feature
- Industrial Grade Durability
- Cost Effective

*AirStreme FoamMaster system* automatically dilutes concentrated Foaming AirSolution or BioStreme with water; and uses compressed air to generate an odor counteracting, thick, rich, foam.

## AirStreme FoamMaster - For use with Foaming Airsolutions or BioStreme products

The AirStreme FoamMaster automatically dilutes the concentrate with water, then injects air to generate dry, rich, clinging foam. Compressed air power allows the system to foam areas up to 5,000 square feet at a time. FoamMaster includes an air adjustment to change foam thickness and full rinse capability. It comes complete with a 25 ft. (8 meter) hose and heavy duty brass spray gun.

When it comes to large area odor control and cleaning, there's no more effective and efficient method than the AirStreme FoamMaster. Not only does the FoamMaster allow you to clean hard-to-reach areas not always accessible by traditional cleaning methods; it also helps to avoid the damage done to walls and other equipment by using high pressure tools, as well as reducing expensive labor time.

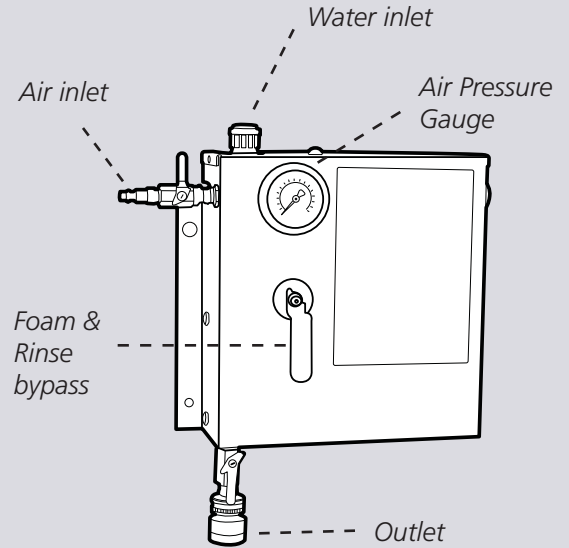

The FoamMaster is ideal for transfer stations, food processing packaging facilities, bakeries, truck/industrial vehicle cleaning and other industrial odor control/cleaning needs.

### Features & Benefits

- As little as 3 gallons (12 liters) per minute water flow, and compressed air pressure of 40 psi (3bar or 3kg).
- Chemical-contact components are made of chemical resistant materials, allowing use with acids and concentrated solutions.
- Air and water flow can be controlled to deliver the foam thickness you need.
- Built-in check valve prevents compressed air from forcing its way into the water line, allowing you to increase air flow for improved cleaning.
- Rinse feature allows you to pre-rinse the area before cleaning or if desired, after cleaning without an additional hose.
- Comes complete with 25ft. (8 meter) heavy duty discharge hose and brass foam/rinse nozzle with on/off valve.

### Ideal For:

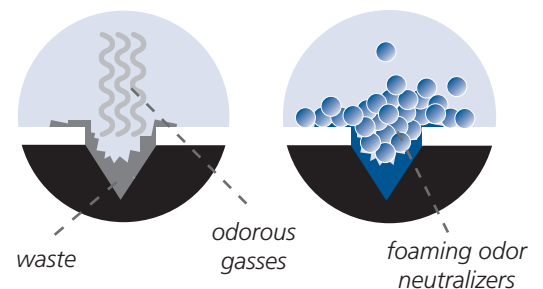

- Transfer Stations
- Food processing facilities
- Truck and vehicle cleaning
- Dumpsters
- Food processing plants
- Other industrial cleaning

### Wall or Cart Mounted – Includes

- Stainless steel cabinet
- Air pressure gauge
- Rinse bypass for rinsing without an additional hose.
- Hose-end shut off with brass foam/rinse nozzle.
- 25ft. (8m) heavy duty discharge hose

### BioStreme and AirSolution Formulations

These topical formulations are proprietary blends that visibly coat problem areas breaking down and controlling odor problems both on the surface and in the air.
